INDEX TO AUTHORS

A

Abrams, Adolph. *O*-Acetyl groups in the cell wall of *Streptococcus faecalis*, 949

Adler, Max, Weissmann, Bernard, and **Gutman, Alexander B.** Occurrence of methylated purine bases in yeast ribonucleic acid, 717

Alfin-Slater, Roslyn B. See *Mukherjee, Kunitake, and Alfin-Slater*, 91

Alles, Jeanne. See *Frieden and Alles*, 797

Allmann, D. W. See *Walter and Mahler*, 241

Anderson, Minnie L. See *Wright, Anderson, and Herman*, 271

Ashmore, James. See *Cahill, Hastings, Ashmore, and Zottu*, 125

—. See *Spiro, Ashmore, and Hastings*, 761

Azari, Parviz R. See *Rhodes, Azari, and Feeney*, 399

B

Baer, Erich, and **Buchnea, Dmytro.** Synthesis of unsaturated α,β-diglycerides. I. D-α,β-Diolein and L-α,β-diolein, 447

Ball, Eddie. See *Ifland, Ball, Dunn, and Shive*, 897

Banerjee, Sachchidananda, Biswas, Debajit K., and **Singh, H. Devendra.** Studies on carbohydrate metabolism in scorbutic guinea pigs, 261

Barker, H. A. See *Munch-Petersen and Barker*, 649

Bartsch, Robert G., and **Kamen, Martin D.** On the new heme protein of facultative photoheterotrophs, 41

Beatty, Clarissa H., West, Edward S., and **Bocek, Rose Mary.** Effect of succinate, fumarate, and oxalacetate on ketone body production by liver slices from non-diabetic and diabetic rats, 725

Berger, C. R. A. See *Wolf and Berger*, 231

Bergmann, Felix, Dikstein, Shabtay, and **Chaimovitz, Moshe.** Notes on the quantitative determination of xanthines and uric acids in plasma, 193

—. See *Dikstein, Bergmann, and Chaimovitz*, 203

Bergmann, Fred H., Towne, Jack C., and **Burris, R. H.** Assimilation of carbon dioxide by hydrogen bacteria, 13

Binkley, Francis. See *Shippey and Binkley*, 699

Biswas, Debajit K. See *Banerjee, Biswas, and Singh*, 261

Blackburn, Robert. See *Nachlas and Blackburn*, 1051

Bocek, Rose Mary. See *Beatty, West, and Bocek*, 725

Booth, Albert N., Jones, Francis T., and **DeEds, Floyd.** Metabolic fate of hesperidin, eriodictyol, homoeriodictyol, and diosmin, 661

Boström, Harry, Rodén, Lennart, and **Yamashina, Ikuo.** On the metabolism of the acid glycoprotein in plasma, 381

Brin, Myron, Shohet, Stephen S., and **Davidson, Charles S.** The effect of thiamine deficiency on the glucose oxidative pathway of rat erythrocytes, 319

— and **Yonemoto, Robert H.** Stimulation of the glucose oxidative pathway in human erythrocytes by methylene blue, 307

Bronk, J. Ramsey. See *Kielley and Bronk*, 521

Buchnea, Dmytro. See *Baer and Buchnea*, 447

Bulbenko, Angelina. See *Walter and Mahler*, 241

Bürgi, Antoinette F. See *Schmid, MacNair, and Bürgi*, 853

XUM

Burns, J. J. See *Hellman and Burns*, 923
Burris, R. H. See *Bergmann, Towne, and Burris*, 13

C

Cahill, George F., Jr., Hastings, A. Baird, Ashmore, James, and **Zottu, Sylvia.** Studies on carbohydrate metabolism in rat liver slices. X. Factors in the regulation of pathways of glucose metabolism, 125
Caspi, Eliahu, and **Pechet, Maurice M.** Metabolism of 1-dehydrosteroids in man. I. Isolation of six urinary products after the administration of prednisolone, 843
Cavallini, Doriano, De Marco, Carlo, and **Mondovì, Bruno.** Experiments with D-cysteine in the rat, 25
Chaikoff, I. L. See *Lossow and Chaikoff*, 149
Chaimovitz, Moshe. See *Bergmann, Dikstein, and Chaimovitz*, 193
—. See *Dikstein, Bergmann, and Chaimovitz*, 203
Chavré, Virginia J. See *Smith, Chavré, and Parker*, 283
Chow, Bacon F. See *Hsu, Davis, and Chow*, 889
Clark, William R., McLaughlin, Joseph, and **Webster, Marion E.** An aminohexuronic acid as the principal hydrolytic component of the Vi antigen, 81
Cohen, Elaine. See *Keller, Cohen, and Neurath*, 905
Cohen, Philip P. See *Hall, Metzenberg, and Cohen*, 193
Cohn, Mildred. Phosphate-water exchange reaction catalyzed by inorganic pyrophosphatase of yeast, 369
Crook, Leona. See *Lowy, Jaffé, Vanderhoff, Crook, and London*, 409

D

Davidson, Charles S. See *Brin, Shohet, and Davidson*, 319
Davis, Robert L. See *Hsu, Davis, and Chow*, 889
DeEds, Floyd. See *Booth, Jones, and DeEds*, 661
De Long, Chester W. See *Stevens and De Long*, 991
De Marco, Carlo. See *Cavallini, De Marco, and Mondovì*, 25
Deshpande, P. D., Harper, A. E., and **Elvehjem, C. A.** Amino acid imbalance on low fibrin diets, 327
—, —, and —. Amino acid imbalance and nitrogen retention, 335
Dikstein, Shabtay, Bergmann, Felix, and **Chaimovitz, Moshe.** On the quantitative determination of xanthines and uric acids in urine, 203
—. See *Bergmann, Dikstein, and Chaimovitz*, 193
Distler, Jack J., Merrick, Joseph M., and **Roseman, Saul.** Glucosamine metabolism. III. Preparation and *N*-acetylation of crystalline D-glucosamine- and D-galactosamine-6-phosphoric acids, 497
Doisy, E. A., Jr. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy*, 573, 597
—. See *Mahowald, Yin, Matschiner, Hsia, Doisy, Elliott, and Doisy*, 581
—. See *Matschiner, Ratliff, Mahowald, Doisy, Elliott, Hsia, and Doisy*, 589
Doisy, Edward A. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy*, 573, 597
—. See *Mahowald, Yin, Matschiner, Hsia, Doisy, Elliott, and Doisy*, 581
—. See *Matschiner, Ratliff, Mahowald, Doisy, Elliott, Hsia, and Doisy*, 589
Douglass, Carl D., and **Hogan, Rose.** Formation of protocatechuic acid from quercetin by rat kidney *in vitro*, 625
Drabkin, David L. See *Marsh and Drabkin*, 1063, 1073, 1083
Drisko, Richard W. See *Schaffer, Lang, Simet, and Drisko*, 185
Dunn, Floyd W. See *Ifland, Ball, Dunn, and Shive*, 897
Dutton, H. J. See *Tookey, Wilson, Lohmar, and Dutton*, 65

E

Eagle, Harry. See *Salzman, Eagle, and Sebring,* 1001

Elliott, William H. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy,* 573, 597

—. See *Mahowald, Yin, Matschiner, Hsia, Doisy, Elliott, and Doisy,* 581

—. See *Matschiner, Ratliff, Mahowald, Doisy, Elliott, Hsia, and Doisy,* 589

El-Sadr, M. M. See *Selim, Ramadan, and El-Sadr,* 157

Elvehjem, C. A. See *Deshpande, Harper, and Elvehjem,* 327, 335

Estabrook, Ronald W. The spectral and enzymatic characterization of cytochrome c_1 of liver mitochondria, 735

F

Feeney, Robert E. See *Rhodes, Azari, and Feeney,* 399

Fernandes, J. F. See *Khorana, Fernandes, and Kornberg,* 941

Field, Henry, Jr. See *Swell, Trout, Field, and Treadwell,* 631

Finkle, Bernard J., and **Smith, Emil L.** Crystalline papain: number and reactivity of thiol groups; chromatographic behavior, 669

Freedland, R. A., and **Harper, A. E.** Metabolic adaptations in higher animals. II. Changes with time in the adaptive response of glucose-6-phosphatase, 833

Frieden, Earl, and **Alles, Jeanne.** Subtle interactions of cupric ion with nucleic acid and components, 797

Friedmann, Bernice. See *Reichard, Friedmann, Maass, and Weinhouse,* 387

Fruton, Joseph S. See *Fujii and Fruton,* 1

Fujii, Setsuro, and **Fruton, Joseph S.** Transamidation reactions catalyzed by cathepsins, 1

G

Gaitonde, M. K., and **Gordon, Malcolm W.** A microchemical method for the detection and determination of shikimic acid, 1043

Gholson, R. K., Rao, D. R., and **Henderson, L. M.** The metabolism of DL-tryptophan-7α-C^{14} by the rat, 179

Giuditta, A. See *Warringa and Giuditta,* 111

—. See *Warringa, Smith, Giuditta, and Singer,* 97

Glantz, Morton D. See *Zipper and Glantz,* 621

Goldin, Abraham. See *Shuster and Goldin,* 873, 883

Goldsworthy, Patrick D., and **Volwiler, Wade.** Mechanism of protein turnover studied with cystine-S^{35}, lysine-C^{14} doubly labeled plasma proteins of the dog, 817

Goodwin, Laurance D., and **Kinney, John M.** Studies of one-carbon metabolism in man, 487

Gordon, Malcolm W. See *Gaitonde and Gordon,* 1043

Greenberg, David M. See *Matsuo and Greenberg,* 545, 561

—. See *Nakao and Greenberg,* 603

Gutman, Alexander B. See *Adler, Weissmann, and Gutman,* 717

H

Hall, Leo M., Metzenberg, R. L., and **Cohen, Philip P.** Isolation and characterization of a naturally occurring cofactor of carbamyl phosphate biosynthesis, 1013

Hanke, Martin E. See *Koppelman, Mandeles, and Hanke,* 73

Harper, A. E. See *Deshpande, Harper, and Elvehjem,* 327, 335

—. See *Freedland and Harper,* 833

Harwell, Shirley O. See *Touster and Harwell,* 1031

Hastings, A. Baird. See *Cahill, Hastings, Ashmore, and Zottu,* 125

—. See *Spiro, Ashmore, and Hastings,* 761

—. See *Spiro and Hastings,* 751

Heath, Edward C., and **Roseman, Saul.** The conversion of D-glucose to L-fucose by *Aerobacter cloacae,* 511

Hellman, Leon, and **Burns, J. J.** Metabolism of L-ascorbic acid-1-C^{14} in man, 923

Henderson, L. M. See *Gholson, Rao, and Henderson,* 179

Herman, Emery C. See *Wright, Anderson, and Herman,* 271

Hill, Robert J., Hobbs, Donald C., and **Koeppe, Roger E.** The incorporation of non-carboxyl carbon into glutamic acid, alanine, and aspartic acid by the rat, 169

Hobbs, Donald C., and **Koeppe, Roger E.** The metabolism of glutaric acid-3-C^{14} by the intact rat, 655

—. See *Hill, Hobbs, and Koeppe,* 169

Hogan, Rose. See *Douglass and Hogan,* 625

Hsia, S. L., Matschiner, John T., Mahowald, Theodore A., Elliott, William H., Doisy, E. A., Jr., Thayer, Sidney A., and **Doisy, Edward A.** Bile acids. VII. Structure of Acid I, 573

—, —, —, —, **Doisy, E. A., Jr., Thayer, Sidney A.,** and **Doisy, Edward A.** Bile acids. X. Characterization and partial synthesis of Acid IV, 597

—. See *Mahowald, Yin, Matschiner, Hsia, Doisy, Elliott, and Doisy,* 581

—. See *Matschiner, Ratliff, Mahowald, Doisy, Elliott, Hsia, and Doisy,* 589

Hsu, Jeng Mein, Davis, Robert L., and **Chow, Bacon F.** Electrolyte imbalance in vitamin B_6-deficient rats, 889

Huang, Po Chao, and **Miller, O. Neal.** Studies on the metabolism of lactaldehyde. V. The metabolism of D-rhamnulose-1-phosphate and 6-deoxy-L-sorbose-1-phosphate, 805

I

Ifland, Paul W., Ball, Eddie, Dunn, Floyd W., and **Shive, William.** Peptide and keto acid utilization in replacing phenylalanine in adaptive enzyme synthesis, 897

J

Jacobsen, Ann. See *Lorand and Jacobsen,* 421

Jaffé, Ernst R. See *Lowy, Jaffé, Vanderhoff, Crook, and London,* 409

Johnson, B. Connor. See *Wagle, Mehta, and Johnson,* 137

—. See *Wagle, Vaughan, Mistry, and Johnson,* 917

—. See *Wolf, Wagle, Van Dyke, and Johnson,* 979

Jones, Francis T. See *Booth, Jones, and DeEds,* 661

K

Kalf, George F., and **Rieder, Sidney V.** The purification and properties of trehalase, 691

Kamen, Martin D. See *Bartsch and Kamen,* 41

Kaufman, Seymour. A new cofactor required for the enzymatic conversion of phenylalanine to tyrosine, 931

Keller, Patricia J., Cohen, Elaine, and **Neurath, Hans.** Procarboxypeptidase. II. Chromatographic isolation, further characterization, and activation, 905

Khorana, H. G., Fernandes, J. F., and **Kornberg, Arthur.** Pyrophosphorylation of ribose 5-phosphate in the enzymatic synthesis of 5-phosphoryl-ribose 1-pyrophosphate, 941

Kielley, W. Wayne, and **Bronk, J. Ramsey.** Oxidative phosphorylation in mitochondrial fragments obtained by sonic vibration, 521

Kinney, J. M. See *Goodwin and Kinney,* 487

Koeppe, Roger E. See *Hill, Hobbs, and Koeppe,* 169

—. See *Hobbs and Koeppe,* 655

Kolb, Joseph J. See *Shockman, Kolb, and Toennies,* 961

Koppelman, Ray, Mandeles, Stanley, and **Hanke, Martin E.** Use of enzymes and radiocarbon in estimation of the equilibrium constants for the decarboxylation of lysine and glutamate, 73

Koritz, Seymour B., and **Péron, Fernand G.** Studies on the mode of action of the adrenocorticotropic hormone, 343

Kornberg, Arthur. See *Khorana, Fernandes, and Kornberg,* 941
Kunitake, George. See *Mukherjee, Kunitake, and Alfin-Slater,* 91
Kushinsky, Stanley. Synthesis of 19-nortestosterone acetate-4-C^{14} and 17β-estradiol-4-C^{14}. Isolation of a hydroxylated intermediate or side product in the *Corynebacterium simplex* aromatization of 19-nortestosterone acetate-4-C^{14}, 31

L

La Du, Bert N., Zannoni, Vincent G., Laster, Leonard, and **Seegmiller, J. E.** The nature of the defect in tyrosine metabolism in alcaptonuria, 251
Lang, Robert P. See *Schaffer, Lang, Simet, and Drisko,* 185
Lardy, Henry A. See *McMurray, Maley, and Lardy,* 219
Laster, Leonard. See *La Du, Zannoni, Laster, and Seegmiller,* 251
Lohmar, R. L. See *Tookey, Wilson, Lohmar, and Dutton,* 65
London, Irving M. See *Lowy, Jaffé, Vanderhoff, Crook, and London,* 409
Lorand, L., and **Jacobsen, Ann.** Studies on the polymerization of fibrin. The role of the globulin: fibrin-stabilizing factor, 421
Lossow, W. J., and **Chaikoff, I. L.** Secretion of intravenously administered tripalmitin-1-C^{14} and octanoate-1-C^{14} into milk by the lactating rat, 149
Lowy, Bertram A., Jaffé, Ernst R., Vanderhoff, Grace A., Crook, Leona, and **London, Irving M.** The metabolism of purine nucleosides by the human erythrocyte *in vitro,* 409

M

Maass, Alfred R. See *Reichard, Friedmann, Maass, and Weinhouse,* 387
MacNair, Margaret B. See *Schmid, MacNair, and Bürgi,* 853
Mahler, H. R. See *Walter and Mahler,* 241
Mahowald, Theodore A., Yin, Mao Wu, Matschiner, John T., Hsia, S. L., Doisy, E. A., Jr., Elliott, William H., and **Doisy, Edward A.** Bile acids. VIII. Metabolism of 7-ketolithocholic acid-24-C^{14} in the rat, 581
Mahowald, Theodore A. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy,* 573
—. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy,* 597
—. See *Matschiner, Ratliff, Mahowald, Doisy, Elliott, Hsia, and Doisy,* 589
Malawista, Ina, and **Schubert, Maxwell.** Chondromucoprotein; new extraction method and alkaline degradation, 535
Maley, Gladys Feldott. See *McMurray, Feldott, and Lardy,* 219
Mandeles, Stanley. See *Koppelman, Mandeles, and Hanke,* 73
Marsh, Julian B., and **Drabkin, David L.** Metabolic channeling in experimental nephrosis. III. Influence of diet and of adrenalectomy; liver hypertrophy, 1063
— and —. IV. Net synthesis of plasma albumin by liver slices from normal and nephrotic rats, 1073
— and —. V. Lipide metabolism in the early stages of the disease, 1083
Matschiner, John T., Ratliff, Robert L., Mahowald, Theodore A., Doisy, E. A., Jr., Elliott, William H., Hsia, S. L., and **Doisy, Edward A.** Bile acids. IX. Metabolites of hyodeoxycholic acid-24-C^{14} in surgically jaundiced rats, 589
—. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy,* 573
—. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy,* 597
—. See *Mahowald, Yin, Matschiner, Hsia, Doisy, Elliott, and Doisy,* 581
Matsuo, Yoshihiko, and **Greenberg, David M.** A crystalline enzyme that cleaves homoserine and cystathionine. I. Isolation procedure and some physicochemical properties, 545
— and —. II. Prosthetic group, 561

McLaughlin, Joseph. See *Clark, McLaughlin, and Webster,* 81
McMurray, W. C., Maley, Gladys Feldott, and **Lardy, Henry A.** Oxidative phosphorylation by sonic extracts of mitochondria, 219
Mehta, Ranjan. See *Wagle, Mehta, and Johnson,* 137
Merrick, Joseph M. See *Distler, Merrick, and Roseman,* 497
Metzenberg, R. L. See *Hall, Metzenberg, and Cohen,* 1013
Miller, O. Neal. See *Huang and Miller,* 805
—. See *Sandman and Miller,* 353, 361, 791
Mistry, S. P. See *Wagle, Vaughan, Mistry, and Johnson,* 917
Mondovì, Bruno. See *Cavallini, De Marco, and Mondovì,* 25
Moore, Stanford. See *Tallan, Moore, and Stein,* 707
Mukherjee, Supravat, Kunitake, George, and **Alfin-Slater, Roslyn B.** The esterification of cholesterol with palmitic acid by rat liver homogenates, 91
Munch-Petersen, A., and **Barker, H. A.** The origin of the methyl group in mesaconate formed from glutamate by extracts of *Clostridium tetanomorphum,* 649
Murayama, Makio. Titratable sulfhydryl groups of hemoglobin C and fetal hemoglobin at 0° and 38°, 163

N

Nachlas, Marvin M., and **Blackburn, Robert.** The colorimetric determination of urinary lipase, 1051
Nakao, Akira, and **Greenberg, David M.** Studies on the incorporation of isotope from formaldehyde-C^{14} and serine-3-C^{14} into the methyl group of methionine, 603
Neurath, Hans. See *Keller, Cohen, and Neurath,* 905

P

Pardee, Arthur B. See *Trucco and Pardee,* 435
Parker, M. J. See *Smith, Chavrê, and Parker,* 283
Parks, L. W., and **Schlenk, F.** The stability and hydrolysis of *S*-adenosylmethionine; isolation of *S*-ribosylmethionine, 295
Parsons, Donald W. See *Koritz and Péron,* 343
Pechet, Maurice M. See *Caspi and Pechet,* 843
Péron, Fernand G. See *Koritz and Péron,* 343
Price, J. M. See *Satoh and Price,* 781

R

Rafter, Gale W. A pyrophosphatase activity associated with mouse liver particles, 643
Ramadan, M. E. A. See *Selim, Ramadan, and El-Sadr,* 157
Rao, D. R. See *Gholson, Rao, and Henderson,* 179
Ratliff, Robert L. See *Matschiner, Ratliff, Mahowald, Doisy, Elliott, Hsia, and Doisy,* 589
Reichard, George A., Friedmann, Bernice, Maass, Alfred R., and **Weinhouse, Sidney.** Turnover rates of blood glucose in normal dogs during hyperglycemia induced by glucose or glucagon, 387
Rhodes, Marvin B., Azari, Parviz R., and **Feeney, Robert E.** Analysis, fractionation, and purification of egg white proteins with cellulose-cation exchanger, 399
Rieder, Sidney V. See *Kalf and Rieder,* 691
Roberts, D. W. A. The wheat leaf phosphatases. IV. The effect of metal ions on the acid phosphatase activity of dialyzed juice, 213
Rodén, Lennart. See *Boström, Rodén, and Yamashina,* 381
Roseman, Saul. See *Distler, Merrick, and Roseman,* 497
—. See *Heath and Roseman,* 511

S

Salzman, Norman P., Eagle, Harry, and **Sebring, Edwin D.** The utilization of

glutamine, glutamic acid, and ammonia for the biosynthesis of nucleic acid bases in mammalian cell cultures, 1001

Sandman, Robert P., and **Miller, O. Neal.** Studies on the metabolism of lactaldehyde. I. Separation and determination of lactaldehyde and related 3-carbon compounds, 353

— and —. II. By bakers' yeast cells, 361

— and —. III. By alcohol and aldehyde dehydrogenase, 791

Satoh, Kiyoo, and **Price, J. M.** Fluorometric determination of kynurenic acid and xanthurenic acid in human urine, 781

Schaffer, Norwood K., Lang, Robert P., Simet, Leon, and **Drisko, Richard W.** Phosphopeptides from acid-hydrolyzed P^{32}-labeled isopropyl methylphosphonofluoridate-inactivated trypsin, 185

Schlenk, F. See *Parks and Schlenk*, 295

Schmid, K., MacNair, Margaret B., and **Bürgi, Antoinette F.** The chromatographic separation and purification of acidic proteins on carboxylated ion exchange resins, 853

Schubert, Maxwell. See *Malawista and Schubert*, 535

Sebring, Edwin D. See *Salzman, Eagle, and Sebring*, 1001

Seegmiller, J. E. See *La Du, Zannoni, Laster, and Seegmiller*, 251

Selim, A. S. M., Ramadan, M. E. A., and **El-Sadr, M. M.** Zinc and cobalt picrates as reagents for specific precipitation of glycine from protein hydrolysates, 157

Shippey, Sarah Sue, and **Binkley, Francis.** Amino acid esterase activities of swine kidney, 699

Shive, William. See *Ifland, Ball, Dunn, and Shive*, 897

Shockman, Gerald D., Kolb, Joseph J., and **Toennies, Gerrit.** Relations between bacterial cell wall synthesis, growth phase, and autolysis, 961

Shohet, Stephen S. See *Brin, Shohet, and Davidson*, 319

Shuster, Louis, and **Goldin, Abraham.** The conversion of glucose to pentose in the biosynthesis of mouse liver diphosphopyridine nucleotide, 883

— and —. The incorporation of C^{14}-glucose and C^{14}-ribose into mouse liver diphosphopyridine nucleotide, 873

Simet, Leon. See *Schaffer, Lang, Simet, and Drisko*, 185

Simpson, F. J., Wolin, M. J., and **Wood, W. A.** Degradation of L-arabinose by *Aerobacter aerogenes*. I. A pathway involving phosphorylated intermediates, 457

—, and **Wood, W. A.** Degradation of L-arabinose by *Aerobacter aerogenes*. II. Purification and properties of L-ribulokinase, 473

Singer, Thomas P. See *Warringa, Smith, Giuditta, and Singer*, 97

Singh, H. Devendra. See *Banerjee, Biswas, and Singh*, 261

Smith, Emil L., Chavré, Virginia J., and **Parker, M. J.** Kinetics of papain action. II. Effect of pH on hydrolysis of three substrates, 283

—. See *Finkle and Smith*, 669

Smith, O. H. See *Warringa, Smith, Giuditta, and Singer*, 97

Spiro, Robert G. Studies on carbohydrate metabolism in rat liver slices. XIII. Influence of the pituitary on the insulin-deficient state, 773

—, **Ashmore, James,** and **Hastings, A. Baird.** Studies on carbohydrate metabolism in rat liver slices. XII. Sequence of metabolic events following acute insulin deprivation, 761

—, and **Hastings, A. Baird.** Studies on carbohydrate metabolism in rat liver slices. XI. Effect of prolonged insulin administration to the alloxan-diabetic animal, 751

Stein, William H. See *Tallan, Moore, and Stein*, 707

Stevens, Carl M., and **De Long, Chester W.** Valine metabolism and penicillin biosynthesis, 991

Swell, Leon, Trout, E. C., Jr., Field, Henry, Jr., and **Treadwell, C. R.** The role of lymph cholesterol in the regulation of endogenous cholesterol and cholesterol ester synthesis, 631

T

Tallan, Harris H., Moore, Stanford, and **Stein, William H.** L-Cystathionine in human brain, 707

Thayer, Sidney A. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy,* 573, 597

Toennies, Gerrit. See *Shockman, Kolb, and Toennies,* 961

Tookey, Harvey L., Wilson, Robert G., Lohmar, R. L., and **Dutton, H. J.** Coupled oxidation of carotene and linoleate catalyzed by lipoxidase, 65

Touster, Oscar, and **Harwell, Shirley O.** The isolation of L-arabitol from pentosuric urine, 1031

Towne, Jack C. See *Bergmann, Towne, and Burris,* 13

Treadwell, C. R. See *Swell, Trout, Field, and Treadwell,* 631

Trout, E. C., Jr. See *Swell, Trout, Field, and Treadwell,* 631

Trucco, Raul E., and **Pardee, Arthur B.** Synthesis of *Escherichia coli* cell walls in the presence of penicillin, 435

U

Udenfriend, Sidney. See *Weissbach, Waalkes, and Udenfriend,* 865

V

Vanderhoff, Grace A. See *Lowy, Jaffé, Vanderhoff, Crook, and London,* 409

Van Dyke, Russell A. See *Wolf, Wagle, Van Dyke, and Johnson,* 979

Vaughan, David A. See *Wagle, Vaughan, Mistry, and Johnson,* 917

Volwiler, Wade. See *Goldsworthy and Volwiler,* 817

W

Waalkes, T. Philip. See *Weissbach, Waalkes, and Udenfriend,* 865

Wagle, Shreepad R., Mehta, Ranjan, and **Johnson, B. Connor.** Vitamin B_{12} and protein biosynthesis. IV. *In vivo* and *in vitro* studies, 137

—, **Vaughan, David A., Mistry, S. P.,** and **Johnson, B. Connor.** Vitamin B_{12} and nucleic acid biosynthesis, 917

—. See *Wolf, Wagle, Van Dyke, and Johnson,* 979

Walter, Harry, and **Mahler, H. R.** Biochemical studies of the developing avian embryo. I. Protein precursors *in vivo,* 241

Warringa, M. G. P. J., and **Giuditta, A.** Studies on succinic dehydrogenase. IX. Characterization of the enzyme from *Micrococcus lactilyticus,* 111

—, **Smith, O. H., Giuditta, A.,** and **Singer, Thomas P.** Studies on succinic dehydrogenase. VIII. Isolation of a succinic dehydrogenase-fumaric reductase from an obligate anaerobe, 97

Webb, Junius M. Studies on the determination of total nucleic acids by ultraviolet absorption methods, 1023

Webster, Marion E. See *Clark, McLaughlin, and Webster,* 81

Weinhouse, Sidney. See *Reichard, Friedmann, Maass, and Weinhouse,* 387

Weissbach, Herbert, Waalkes, T. Philip, and **Udenfriend, Sidney.** A simplified method for measuring serotonin in tissues; simultaneous assay of both serotonin and histamine, 865

Weissmann, Bernard. See *Adler, Weissmann, and Gutman,* 717

West, Edward S. See *Beatty, West, and Bocek,* 725

Wilson, Robert G. See *Tookey, Wilson, Lohmar, and Dutton,* 65

Wolf, George, and **Berger, C. R. A.** The metabolism of hydroxyproline in the intact rat. Incorporation of hydroxyproline into protein and urinary metabolites, 231

Wolf, George, Wagle, Shreepad R., Van Dyke, Russell A., and **Johnson, B. Connor.** The function of vitamin A in metabolism. II. Vitamin A and adrenocortical hormones. Plate 1, 979

INDEX TO SUBJECTS

A

Acetate: Oxal-. *See* Oxalacetate

Acetate-4-C^{14}: Nortestosterone. *See* Nortestosterone acetate-4-C^{14}

Acetylation: *N*-, D-glucosamine- and D-galactosamine-6-phosphoric acids, *Distler, Merrick, and Roseman,* 497

Acetyl group(s): *O*-, *Streptococcus faecalis, Abrams,* 949

Adenosylmethionine: *S*-, stability and hydrolysis, *Parks and Schlenk,* 295

Adrenalectomy: Influence, hypertrophy, liver, *Marsh and Drabkin,* 1063

Aerobacter aerogenes: L-Arabinose, degradation, effect, *Simpson, Wolin, and Wood,* 457

Aerobacter cloacae: D-Glucose and L-fucose, conversion, effect, *Heath and Roseman,* 511

Alanine: Non-carboxyl carbon, incorporation, *Hill, Hobbs, and Koeppe,* 169

Phenyl-. *See* Phenylalanine

Albumin: Plasma, liver, rats, normal and nephrotic, synthesis, *Marsh and Drabkin,* 1073

Alcaptonuria: Metabolism, tyrosine, defect, nature, *La Du, Zannoni, Laster, and Seegmiller,* 251

Alcohol: Metabolism, lactaldehyde, use, *Sandman and Miller,* 791

Alloxan-diabetic animal: Insulin administration, prolonged, effect, *Spiro and Hastings,* 751

Amino acid: Esterase, kidney, activities, *Shippey and Binkley,* 699

Imbalance, diets, low fibrin, *Deshpande, Harper, and Elvehjem,* 327

—, and nitrogen retention, *Deshpande, Harper, and Elvehjem,* 335

Aminohexuronic acid: Vi antigen, component, principal, *Clark, McLaughlin, and Webster,* 81

Ammonia: Nucleic acid, cell cultures, mammalian, biosynthesis, utilization, *Salzman, Eagle, and Sebring,* 1001

Anaerobe: Obligate, succinic dehydrogenase-fumaric reductase, isolation, *Warringa, Smith, Giuditta, and Singer,* 97

Animal(s): Higher, metabolism, time effects, glucose-6-phosphatase, adaptation, *Freedland and Harper,* 833

Arabinose: L-, degradation, *Aerobacter aerogenes,* effect, *Simpson, Wolin, and Wood,* 457

—, —, — —, effect, *Simpson and Wood,* 473

Arabitol: L-, urine, pentosuric, isolation, *Touster and Harwell,* 1031

Ascorbic acid-1-C^{14}: L-, metabolism, man, *Hellman and Burns,* 923

Aspartic acid: Non-carboxyl carbon, incorporation, *Hill, Hobbs, and Koeppe,* 169

B

Bacteria: Hydrogen, carbon dioxide, assimilation, *Bergmann, Towne, and Burris,* 13

See Aerobacter aerogenes, Aerobacter cloacae, etc.

Bacterial cell wall: Synthesis, growth phase, autolysis, relations, *Shockman, Kolb, and Toennies,* 961

Bile acid(s): Acid I, structure, *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy,* 573

— IV, characterization and synthesis, partial, *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy,* 597

Hyodeoxycholic acid-24-C^{14}, metabolites, *Matschiner, Ratliff, Mahowald, Doisy, Elliott, Hsia, and Doisy,* 589

7-Ketolithocholic acid-24-C^{14}, metabo-

Bile acid(s)—*continued:*
lism, *Mahowald, Yin, Matschiner, Hsia, Doisy, Elliott, and Doisy,* 581
Blood: Glucose, turnover rates, during hyperglycemia, *Reichard, Friedmann, Maass, and Weinhouse,* 387
Brain: Human, L-cystathionine, *Tallan, Moore, and Stein,* 707

C

Carbamyl phosphate: Biosynthesis, cofactor, isolation and characterization, *Hall, Metzenberg, and Cohen,* 1013
Carbohydrate: Metabolism, guinea pigs, scorbutic, *Banerjee, Biswas, and Singh,* 261
—, liver, rat, *Spiro,* 773
—, —, —, *Spiro, Ashmore, and Hastings,* 761
—, —, —, *Spiro and Hastings,* 751
—, — slices, studies, *Cahill, Hastings, Ashmore, and Zottu,* 125
Carbon: Non-carboxyl, glutamic acid, alanine, and aspartic acid, incorporation, *Hill, Hobbs, and Koeppe,* 169
Carbon dioxide: Bacteria, hydrogen, assimilation, *Bergmann, Towne, and Burris,* 13
Carotene: Linoleate, oxidation, coupled, by lipoxidase, catalyzed, *Tookey, Wilson, Lohmar, and Dutton,* 65
Catechuic acid: Proto-. *See* Protocatechuic acid
Cathepsin(s): Transamidation reactions, catalysis, *Fujii and Fruton,* 1
Cholesterol: Esterification, with palmitic acid, liver homogenates, use, *Mukherjee, Kunitake, and Alfin-Slater,* 91
Lymph, regulation and synthesis, role, *Swell, Trout, Field, and Treadwell,* 631
Cholic acid-24-C^{14}: Hyodeoxy-. *See* Hyodeoxycholic acid-24-C^{14}
7-Ketolitho-. *See* Ketolithocholic acid-24-C^{14}
Chondromucoprotein: Degradation, alkaline, and extraction, new method, *Malawista and Schubert,* 535
Clostridium tetanomorphum: Mesaconate, formation, glutamate, role, *Munch-Petersen and Barker,* 649
Cobalt picrate(s): Precipitation, glycine, from protein hydrolysates, *Selim, Ramadan, and El-Sadr,* 157
Coenzyme(s): Polyglutamyl pteridine, metabolism, serine, role, *Wright, Anderson, and Herman,* 271
Corynebacterium simplex: 19-Nortestosterone acetate-4-C^{14}, aromatization, side product, isolation, *Kushinsky,* 31
Cupric ion: Nucleic acid, interactions, *Frieden and Alles,* 797
Cystathionine: Enzyme, crystalline, effect, *Matsuo and Greenberg,* 545, 561
L-, brain, human, *Tallan, Moore, and Stein,* 707
Cysteine: D-, experiments, *Cavallini, De Marco, and Mondovì,* 25
Cystine-S^{35}: Plasma proteins, dog, doubly labeled, turnover mechanism, effect, *Goldsworthy and Volwiler,* 817
Cytochrome c_1: Mitochondria, liver, *Estabrook,* 735

D

Dehydrogenase: Aldehyde, metabolism, lactaldehyde, use, *Sandman and Miller,* 791
Succinic. *See* Succinic dehydrogenase
Dehydrosteroid(s): 1-, metabolism, *Caspi and Pechet,* 843
Deoxy-L-sorbose-1-phosphate: 6-, metabolism, *Huang and Miller,* 805
Diabetes: Liver, rats, ketone body production, *Beatty, West, and Bocek,* 725
Diet: Influence, hypertrophy, liver, *Marsh and Drabkin,* 1063
Dihydrofolic acid: Formation, enzymatic, *Wright, Anderson, and Herman,* 271
Dihydroteropterin: Formation, enzymatic, *Wright, Anderson, and Herman,* 271

Diolein: D-α,β- and L-α,β-, unsaturated, synthesis, *Baer and Buchnea*, 447
Diosmin: Fate, metabolic, *Booth, Jones, and DeEds*, 661
Diphosphopyridine nucleotide: Liver, C^{14}-glucose and C^{14}-ribose, incorporation, *Shuster and Goldin*, 873

E

Egg white: Proteins, cellulose-cation exchanger, and analysis, *Rhodes, Azari, and Feeney*, 399
Electrolyte imbalance: Rats, vitamin B_6-deficient, *Hsu, Davis, and Chow*, 889
Embryo: Avian, studies, biochemical, *Walter and Mahler*, 241
Enzyme(s): Co-. *See* Coenzyme
Crystalline, homoserine and cystathione, effect, *Matsuo and Greenberg*, 545, 561
Equilibrium constants, estimation, use, *Koppelman, Mandeles, and Hanke*, 73
See also Esterase, Dehydrogenase, etc.
Equilibrium: *See* Electrolyte imbalance; Vibration
Equilibrium constant(s): Lysine and glutamate, decarboxylation, estimation, *Koppelman, Mandeles, and Hanke*, 73
Eriodictyol: Fate, metabolic, *Booth, Jones, and DeEds*, 661
Homo-. *See* Homoeriodictyol
Erythrocyte(s): Human, oxidative pathway, glucose, methylene blue, stimulation, *Brin and Yonemoto*, 307
—, purine nucleosides, metabolism, use, *Lowy, Jaffé, Vanderhoff, Crook, and London*, 409
Oxidative pathway, glucose, stimulation, methylene blue, *Brin and Yonemoto*, 307
Rat, oxidative pathway, glucose, thiamine deficiency, effect, *Brin, Shohet, and Davidson*, 319
Escherichia coli: Cell walls, penicillin, synthesis, *Trucco and Pardee*, 435
Esterase: Amino acid, kidney, activities, *Shippey and Binkley*, 699
Esterification: Cholesterol, with palmitic acid, liver homogenates, use, *Mukherjee, Kunitake, and Alfin-Slater*, 91
Estradiol-4-C^{14}: 17β-, and 19-nortestosterone acetate-4-C^{14}, synthesis, *Kushinsky*, 31

F

Fibrin: Globulin, as stabilizing factor, *Lorand and Jacobsen*, 421
Fluorometric determination: Kynurenic and xanthurenic acids, urine, human, *Satoh and Price*, 781
Folic acid: Dihydro-. *See* Dihydrofolic acid
Formaldehyde-C^{14}: Isotope incorporation, methionine, methyl group, *Nakao and Greenberg*, 603
Fucose: L-, and D-glucose, conversion, *Aerobacter cloacae*, effect, *Heath and Roseman*, 511
Fumarate: Ketone body production, livers, non-diabetic and diabetic rats, effect, *Beatty, West, and Bocek*, 725
Fumaric reductase: Succinic dehydrogenase, isolation, anaerobe, obligate, *Warringa, Smith, Giuditta, and Singer*, 97

G

Galactosamine-6-phosphoric acid: D-, preparation and *N*-acetylation, *Distler, Merrick, and Roseman*, 497
Globulin: Fibrin-stabilizing factor, role, *Lorand and Jacobsen*, 421
Glucagon: Blood glucose, turnover rates, during hyperglycemia, induced by, *Reichard, Friedmann, Maass, and Weinhouse*, 387
Glucosamine: Metabolism, *Distler, Merrick, and Roseman*, 497
Glucosamine-6-phosphoric acid: D-, preparations and *N*-acetylation, *Distler, Merrick, and Roseman*, 497
Glucose: Blood, turnover rates, during hyperglycemia, *Reichard, Friedmann, Maass, and Weinhouse*, 387

Glucose—*continued:*
C^{14}-, diphosphopyridine nucleotide, liver, incorporation, *Shuster and Goldin*, 873
D-, and L-fucose, conversion, *Aerobacter cloacae*, effect, *Heath and Roseman*, 511
Pentose, conversion, diphosphopyridine nucleotide, biosynthesis, *Shuster and Goldin*, 883
Glucose-6-phosphatase: Time, effects, animals, higher, adaptations, *Freedland and Harper*, 833
Glutamate: Decarboxylation, estimation, enzymes and radiocarbons, use, *Koppelman, Mandeles, and Hanke*, 73
Mesaconate, methyl group, formation, *Clostridium tetanomorphum, Munch-Petersen and Barker*, 649
Glutamic acid: Non-carboxyl carbon, incorporation, *Hill, Hobbs, and Koeppe*, 169
Nucleic acid, cell cultures, mammalian, biosynthesis, utilization, *Salzman, Eagle, and Sebring*, 1001
Glutamine: Nucleic acid, cell cultures, mammalian, biosynthesis, utilization, *Salzman, Eagle, and Sebring*, 1001
Glutaric acid-3-C^{14}: Metabolism, by rat, intact, *Hobbs and Koeppe*, 655
Glycine: Precipitation, specific, from protein hydrolysates, *Selim, Ramadan, and El-Sadr*, 157
Glycoprotein: Acid, plasma, metabolism, *Boström, Rodén, and Yamashina*, 381

H

Hemoglobin: Fetal, groups, sulfhydryl, titratable at 0° and 38°, *Murayama*, 163
Hemoglobin C: Fetal, groups, sulfhydryl, titratable at 0° and 38°, *Murayama*, 163
Hesperidin: Fate, metabolic, *Booth, Jones, and DeEds*, 661
Hexuronic acid: Amino-. *See* Aminohexuronic acid
Histamine: Serotonin, and, assay, simultaneous, *Weissbach, Waalkes, and Udenfriend*, 865
Homoeriodictyol: Fate, metabolic, *Booth, Jones, and DeEds*, 661
Homoserine: Enzyme, crystalline, effect, *Matsuo and Greenberg*, 545, 561
Hormone(s): Adrenocortical, vitamin A, and, metabolism, function, *Wolf, Wagle, Van Dyke, and Johnson*, 979
Adrenocorticotropic, mode of action, *Koritz and Péron*, 343
Hydrogen: Bacteria, carbon dioxide, assimilation, *Bergmann, Towne, and Burris*, 13
Hydroxyproline: Protein and metabolites, urinary, incorporation, *Wolf and Berger*, 231
Hyperglycemia: Blood glucose, turnover rates, effect, *Reichard, Friedmann, Maass, and Weinhouse*, 387

I

Insulin: Administration, prolonged, animal, alloxan-diabetic, effect, *Spiro and Hastings*, 751
Deficient state, pituitary, influence, *Spiro*, 773
Deprivation, acute, effects, metabolic, *Spiro, Ashmore, and Hastings*, 761

K

Keto acid: Peptide, and, phenylalanine, replacement, use, *Ifland, Ball, Dunn, and Shive*, 897
Ketolithocholic acid-24-C^{14}: 7-, metabolism, *Mahowald, Yin, Matschiner, Hsia, Doisy, Elliott, and Doisy*, 581
Ketone body production: Livers, nondiabetic and diabetic rats, succinate, fumarate, oxalacetate, effect, *Beatty, West, and Bocek*, 725
Kidney: Amino acid esterase, activities, *Shippey and Binkley*, 699
Protocatechuic acid, formation, *in vitro*, from quercetin, *Douglass and Hogan*, 625
See also Nephrosis

Kinase: Ribulo-. *See* Ribulokinase
Kynurenic acid: Urine, human, determination, fluorometric, *Satoh and Price*, 781

L

Lactaldehyde: 3-Carbon compounds, related, and, separation and determination, *Sandman and Miller*, 353
Metabolism, *Huang and Miller*, 805
—, alcohol and aldehyde, dehydrogenase, use, *Sandman and Miller*, 791
—, by yeast cells, bakers', *Sandman and Miller*, 361
Linoleate: Carotene, oxidation, coupled, by lipoxidase, catalyzed, *Tookey, Wilson, Lohmar, and Dutton*, 65
Lipase: Urinary, determination, colorimetric, *Nachlas and Blackburn*, 1051
Lipide: Metabolism, disease, early stages, *Marsh and Drabkin*, 1083
Lipoxidase: Linoleate, oxidation, *Tookey, Wilson, Lohmar, and Dutton*, 65
Liver: Diphosphopyridine nucleotide, C^{14}-glucose and C^{14}-ribose, incorporation, *Shuster and Goldin*, 873
Homogenates, cholesterol, esterification, use, *Mukherjee, Kunitake, and Alfin-Slater*, 91
Hypertrophy, diet, adrenalectomy, influence, *Marsh and Drabkin*, 1063
Metabolism, carbohydrate, *Spiro*, 773
—, —, *Spiro, Ashmore, and Hastings*, 761
—, —, *Spiro and Hastings*, 751
Mitochondria, cytochrome c_1, *Estabrook*, 735
Non-diabetic and diabetic rats, ketone body production, succinate, fumarate, oxalacetate, effect, *Beatty, West, and Bocek*, 725
Rats, normal and nephrotic, albumin, plasma, synthesis, *Marsh and Drabkin*, 1073
Liver particles: Mouse, pyrophosphatase activity, association, *Rafter*, 643
Lymph: Cholesterol, regulation and synthesis, role, *Swell, Trout, Field, and Treadwell*, 631
Lysine: Decarboxylation, estimation, enzymes and radiocarbons, use, *Koppelman, Mandeles, and Hanke*, 73
Lysine-C^{14}: Plasma proteins, dog, doubly labeled, turnover mechanism, effect, *Goldsworthy and Volwiler*, 817

M

Man: Metabolism, one-carbon, *Goodwin and Kinney*, 487
See also Animal
Mesaconate: Glutamate, formation, *Clostridium tetanomorphum, Munch-Petersen and Barker*, 649
Metabolism: Animals, higher, glucose-6-phosphatase adaptations, *Freedland and Harper*, 833
L-Ascorbic acid-1-C^{14}, man, *Hellman and Burns*, 923
Carbohydrate, guinea pigs, scorbutic, *Banerjee, Biswas, and Singh*, 261
—, liver, rat, *Spiro*, 773
—, —, —, *Spiro, Ashmore, and Hastings*, 761
—, —, —, *Spiro and Hastings*, 751
—, — slices, studies, *Cahill, Hastings, Ashmore, and Zottu*, 125
1-Dehydrosteroids, *Caspi and Pechet*, 843
Glucosamine, *Distler, Merrick, and Roseman*, 497
Glutaric acid-3-C^{14}, *Hobbs and Koeppe*, 655
Glycoprotein, acid, plasma, *Boström, Rodén, and Yamashina*, 381
Hydroxyproline, in rat, *Wolf and Berger*, 231
In vitro, nucleosides, purine, *Lowy, Jaffé, Vanderhoff, Crook, and London*, 409
7-Ketolithocholic acid-24-C^{14}, *Mahowald, Yin, Matschiner, Hsia, Doisy, Elliott, and Doisy*, 581
Lactaldehyde, *Huang and Miller*, 805
—, *Sandman and Miller*, 353, 361

Metabolism—*continued:*
Lactaldehyde, alcohol and aldehyde dehydrogenase, use, *Sandman and Miller*, 791
Lipide, disease, early stages, *Marsh and Drabkin*, 1083
One-carbon, in man, *Goodwin and Kinney*, 487
D-Rhamnulose-1-phosphate and 6-deoxy-L-sorbose-1-phosphate, *Huang and Miller*, 805
Serine, polyglutamyl pteridine, coenzymes, role, *Wright, Anderson, and Herman*, 271
Tryptophan-7-C^{14}, by rat, *Gholson, Rao, and Henderson*, 179
Tyrosine, alcaptonuria, defect, nature, *La Du, Zannoni, Laster, and Seegmiller*, 251
Valine, *Stevens and De Long*, 991
Vitamin A, function, *Wolf, Wagle, Van Dyke, and Johnson*, 979
Metabolite(s): Hyodeoxycholic acid-24-C^{14}, in rats, surgically jaundiced, *Matschiner, Ratliff, Mahowald, Doisy, Elliott, Hsia, and Doisy*, 589
Urinary, hydroxyproline, incorporation, *Wolf and Berger*, 231
Metal ion(s): Phosphatase, acid, dialyzed juice, effect, *Roberts*, 213
Methionine: *S*-Adenosyl-. *See* Adenosylmethionine
Methyl group, formaldehyde-C^{14} and serine-3-C^{14}, isotope incorporation, *Nakao and Greenberg*, 603
S-Ribosyl-. *See* Ribosylmethionine
Methylene blue: Oxidative pathway, glucose, stimulation, *Brin and Yonemoto*, 307
Micrococcus lactilyticus: Enzyme, characterization, *Warringa and Giuditta*, 111
Milk: Rat, lactating, tripalmitin-1-C^{14} and octanoate-1-C^{14}, intravenously administered, *Lossow and Chaikoff*, 149
Mitochondrion: Extracts, sonic, phosphorylation, oxidation, use, *McMurray, Maley, and Lardy*, 219
Liver, cytochrome c_1, *Estabrook*, 735

N

Nephrosis: Experimental, channeling, metabolic, *Marsh and Drabkin*, 1063, 1073, 1083
Nitrogen: Retention, and imbalance, amino acid, *Deshpande, Harper, and Elvehjem*, 335
Nortestosterone acetate-4-C^{14}: 19-, and 17β-estradiol-4-C^{14}, synthesis, *Kushinsky*, 31
Nucleic acid(s): Cell cultures, mammalian, glutamine, glutamic acid, ammonia, biosynthesis, utilization, *Salzman, Eagle, and Sebring*, 1001
Cupric ion, interactions, *Frieden and Alles*, 797
Ribo-. *See* Ribonucleic acid
Total, absorption methods, ultraviolet, determination, *Webb*, 1023
Vitamin B_{12}, and, biosynthesis, *Wagle, Vaughan, Mistry, and Johnson*, 917
Nucleoside(s): Purine, metabolism, *in vitro, Lowy, Jaffé, Vanderhoff, Crook, and London*, 409
Nucleotide: Diphosphopyridine. *See* Diphosphopyridine nucleotide

O

Octanoate-1-C^{14}: Secretion, intravenously administered, in milk, lactating rat, *Lossow and Chaikoff*, 149
Oxalacetate: Ketone body production, livers, non-diabetic and diabetic rats, effect, *Beatty, West, and Bocek*, 725
Oxidation: Carotene and linoleate, by lipoxidase, catalyzed, *Tookey, Wilson, Lohmar, and Dutton*, 65

P

Palmitic acid: Cholesterol, esterification, liver homogenates, use, *Mukherjee, Kunitake, and Alfin-Slater*, 91
Papain: Action, kinetics, *Smith, Chavrê, and Parker*, 283
Crystalline, behavior, chromatographic, *Finkle and Smith*, 669
Penicillin: Biosynthesis, *Stevens and De Long*, 991

Penicillin—*continued:*
Escherichia coli, synthesis, *Trucco and Pardee*, 435
Pentose: Glucose, conversion, diphosphopyridine nucleotide, biosynthesis, *Shuster and Goldin*, 883
Peptidase: Procarboxy-. *See* Procarboxypeptidase
Peptide: Keto acid, and, phenylalanine, replacement, use, *Ifland, Ball, Dunn, and Shive*, 897
Phospho-. *See* Phosphopeptide
Phenylalanine: Peptide, keto acid, and, replacement, use, *Ifland, Ball, Dunn, and Shive*, 897
Tyrosine, conversion, enzymatic, *Kaufman*, 931
Phosphatase(s): Acid, dialyzed juice, metal ions, effect, *Roberts*, 213
Glucose-6-. *See* Glucose-6-phosphatase
Pyro-. *See* Pyrophosphatase
Phosphatase activity: Pyro-. *See* Pyrophosphatase activity
Phosphate: Carbamyl. *See* Carbamyl phosphate
6-Deoxy-L-sorbose-1-. *See* Deoxy-L-sorbose-1-phosphate
D-Rhamnulose-1-. *See* Rhamnulose-1-phosphate
Ribose 5-. *See* Ribose 5-phosphate
Phosphate-water exchange reaction: Pyrophosphatase, inorganic, yeast, catalyzed, *Cohn*, 369
Phosphatide(s): Separation, electrophoretic, paper, *Zipper and Glantz*, 621
Phosphopeptide(s): Trypsin, methylphosphonofluoridate - inactivated, *Schaffer, Lang, Simet, and Drisko*, 185
Phosphoric acid: Galactosamine-6-. *See* Galactosamine-6-phosphoric acid
Glucosamine-6-. *See* Glucosamine-6-phosphoric acid
Phosphorylation: Oxidative, in fragments, mitochondrial, from vibration, sonic, *Kielley and Bronk*, 521
—, mitochondria, sonic extracts, *McMurray, Maley, and Lardy*, 219
Pyro-. *See* Pyrophosphorylation
Phosphorylribose 1-pyrophosphate: 5-, ribose 5-phosphate, synthesis, enzymatic, *Khorana, Fernandes, and Kornberg*, 941
Photoheterotrophs: Facultative, on protein, heme, *Bartsch and Kamen*, 41
Plasma: Acid glycoprotein, metabolism, *Boström, Rodén, and Yamashina*, 381
Proteins, dog, doubly labeled, cystine-S^{35}, and lysine-C^{14}, turnover mechanism, effect, *Goldsworthy and Volwiler*, 817
Uric acids and xanthines, determination, quantitative, *Bergmann, Dikstein, and Chaimovitz*, 193
See also Erythrocyte; Lymph
Polymerization: Fibrin, *Lorand and Jacobsen*, 421
Prednisolone: Administration, urinary products, isolation, *Caspi and Pechet*, 843
Procarboxypeptidase: Isolation, chromatographic, *Keller, Cohen, and Neurath*, 905
Proline: Hydroxy-. *See* Hydroxyproline
Protein(s): Acidic, ion exchange resins, separation, chromatographic, *Schmid, MacNair and Bürgi*, 853
Chondromuco-. *See* Chondromucoprotein
Egg white, analysis, *Rhodes, Azari, and Feeney*, 399
Glyco-. *See* Glycoprotein
Heme, photoheterotrophs, facultative, *Bartsch and Kamen*, 41
Hydroxyproline, incorporation, *Wolf and Berger*, 231
Plasma, dog, doubly labeled, cystine-S^{35}, lysine-C^{14}, turnover mechanism, *Goldsworthy and Volwiler*, 817
Precursors, *in vivo*, *Walter and Mahler*, 241
Vitamin B_{12}, *in vivo* and *in vitro*, *Wagle, Mehta, and Johnson*, 137
Protein hydrolysate(s): Glycine, precipitation, zinc and cobalt picrates, as reagents, *Selim, Ramadan, and El-Sadr*, 157

Protocatechuic acid: Formed, by kidney *in vitro*, from quercetin, *Douglass and Hogan*, 625
Purine: Methylated, ribonucleic acid, yeast, occurrence, *Adler, Weissmann, and Gutman*, 717
Nucleosides, metabolism, *in vitro*, *Lowy, Jaffé, Vanderhoff, Crook, and London*, 409
Pyrophosphatase: Yeast, catalysis, phosphate-water exchange reaction, *Cohn*, 369
Pyrophosphatase activity: Liver particles, mouse, association, *Rafter*, 643

Q

Quercetin: Protocatechuic acid, formed, kidney *in vitro*, as source, *Douglass and Hogan*, 625

R

Radiocarbon(s): Equilibrium constants, estimation, use, *Koppelman, Mandeles, and Hanke*, 73
Rhamnulose-1-phosphate: D-, metabolism, *Huang and Miller*, 805
Ribonucleic acid: Yeast, purine bases, occurrence, *Adler, Weissmann, and Gutman*, 717
Ribose: C^{14}-, diphosphopyridine nucleotide, liver, incorporation, *Shuster and Goldin*, 873
Ribose 5-phosphate: Pyrophosphorylation, 5-phosphorylribose 1-pyrophosphate, synthesis, enzymatic, *Khorana, Fernandes, and Kornberg*, 941
Ribosylmethionine: *S*-, isolation, *Parks and Schlenk*, 295
Ribulokinase: L-, purification and properties, *Simpson and Wood*, 473

S

Serine: Homo-. *See* Homoserine
Serine-3-C^{14}: Isotope incorporation, methionine, methyl group, *Nakao and Greenberg*, 603
Serotonin: Tissue, measurement, simplified, *Weissbach, Waalkes, and Udenfriend*, 865
Shikimic acid: Microchemical method, detection and determination, *Gaitonde and Gordon*, 1043
Steroid: Dehydro-. *See* Dehydrosteroid
Streptococcus faecalis: *O*-Acetyl groups, *Abrams*, 949
Succinate: Ketone body production, livers, non-diabetic and diabetic rats, effect, *Beatty, West, and Bocek*, 725
Succinic dehydrogenase: Fumaric reductase, isolation, anaerobe, obligate, *Warringa, Smith, Giuditta, and Singer*, 97
Study, *Warringa and Giuditta*, 111
—, *Warringa, Smith, Giuditta, and Singer*, 97
Sulfhydryl group(s): Hemoglobin C and fetal hemoglobin, at 0° and 38°, titratable, *Murayama*, 163

T

Teropterin: Dihydro-. *See* Dihydroteropterin
Thiamine deficiency: Erythrocytes, rat, oxidative pathway, glucose, effect, *Brin, Shohet, and Davidson*, 319
Oxidative pathway, glucose, erythrocytes, effect, *Brin, Shohet, and Davidson*, 319
Thiol group(s): Number and reactivity, *Finkle and Smith*, 669
Transamidation: Cathepsin-catalyzed, reactions, *Fujii and Fruton*, 1
Trehalase: Purification and properties, *Kalf and Rieder*, 691
Tripalmitin-1-C^{14}: Secretion, intravenously administered, in milk, lactating rat, *Lossow and Chaikoff*, 149
Trypsin: Methylphosphonofluoridate-inactivated, phosphopeptides, *Schaffer, Lang, Simet, and Drisko*, 185
Tryptophan-7α-C^{14}: Metabolism, by rat, *Gholson, Rao, and Henderson*, 179
Tyrosine: Metabolism, alcaptonuria, defect, nature, *La Du, Zannoni, Laster, and Seegmiller*, 251
Phenylalanine, conversion, enzymatic, *Kaufman*, 931

U

Uric acid(s): Determination, quantitative, in plasma, *Bergmann, Dikstein, and Chaimovitz,* 193
—, —, — urine, *Dikstein, Bergmann, and Chaimovitz,* 203
Urinary product(s): Prednisolone, administration, isolation, *Caspi and Pechet,* 843
Urine: Human, kynurenic and xanthurenic acids, determination, fluorometric, *Satoh and Price,* 781
Pentosuric, L-arabitol, isolation, *Touster and Harwell,* 1031
Xanthines and uric acids, determination, quantitative, *Dikstein, Bergmann, and Chaimovitz,* 203

V

Valine: Metabolism, *Stevens and De Long,* 991
Vi antigen: Aminohexuronic acid, as component, principal, *Clark, McLaughlin, and Webster,* 81
Vibration: Sonic, in fragments, mitochondrial, *Kielley and Bronk,* 521
Vitamin A: Metabolism, function, *Wolf, Wagle, Van Dyke, and Johnson,* 979
Vitamin B_6: Deficiency, rats, imbalance, electrolyte, *Hsu, Davis, and Chow,* 889
Vitamin B_{12}: Nucleic acid, and, biosynthesis, *Wagle, Vaughan, Mistry, and Johnson,* 917
Protein, *in vivo* and *in vitro, Wagle, Mehta, and Johnson,* 137

X

Xanthine(s): Determination, quantitative, in plasma, *Bergmann, Dikstein, and Chaimovitz,* 193
—, —, — urine, *Dikstein, Bergmann, and Chaimovitz,* 203
Xanthurenic acid: Urine, human, determination, fluorometric, *Satoh and Price,* 781

Y

Yeast: Cells, bakers', in metabolism, lactaldehyde, *Sandman and Miller,* 361
Ribonucleic acid, purine bases, occurrence, *Adler, Weissmann, and Gutman,* 717

Z

Zinc: Precipitation, glycine, from protein hydrolysates, as reagent, *Selim, Ramadan, and El-Sadr,* 157
